

Technical Datasheet

Analysis Name:	Pet Food Crude Fibre
Method Number:	LI-75.200
Scope Application:	Description of a gravimetric method for the determination of fat free organic substances which are insoluble in acid and alkali media and are conventionally described as crude fibre. The method applies to wet and dry food products for cats and dogs.
Description:	Successive digestions with boiling solutions of sulphuric acid and potassium hydroxide of specified concentrations. Separation of the residue by filtration on a sintered glass crucible, Drying and ashing of the residue. The loss in weight resulting from ashing corresponds to the crude fibre content of the sample
Sample Weight Required:	50g
Method Reference:	-
Analytical Platform:	Gravimetric

Analyte Reported	Common name	Unit	Typical unit of quantification	uncertainty
Crude Fibre	-	g/100g	0.2	-
