

# Technical Datasheet

Analysis Name:

Pesticides Analysis by GC-MS/MS

Method Number:

LIBR 106

Scope Application:

Description of a method for the analysis of pesticide residues in foods of plant origin, such as fruits (including dried fruits), vegetables (including dried vegetables), cereals and many processed products thereof by using GC-MS(/MS).

Description:

The homogeneous sample is extracted with the help of acetonitrile. Samples with low water content (<80 %) require the addition of water before the initial extraction to get a total of approximately 10 g of water. After addition of magnesium sulfate, sodium chloride and buffering citrate salts, the mixture is shaken intensively and centrifuged for phase separation. An aliquot of the organic phase is cleaned-up by dispersive solid phase extraction (D-SPE) employing bulk sorbents as well as magnesium sulfate for the removal of residual water. Following clean-up with amino-sorbents (e.g. primary secondary amine sorbent, PSA) and if necessary graphitized carbon black (GCB) or octadecylsilane (ODS), extracts are acidified by adding a small amount of formic acid, to improve the storage stability of certain base sensitive pesticides.

Sample Weight Required:

100 g

Method Reference:

-

Analytical Platform:

GC-MS/MS

Special Information:

Method not accredited.

Analyte Reported	Alias	Unit of Measure	Typical Limit of Quantification	Uncertainty
Aldrin	-	mg/kg	0.010	< 50 %
Cyfluthrin (I+Ii+Iii+Iv)	-	mg/kg	0.010	< 50 %
Bromophos (Bromophos-Methyl)	-	mg/kg	0.010	< 50 %
Bromofós-Etil	-	mg/kg	0.010	< 50 %
